Connecting your FranklinWH system to Wi-Fi

You can connect your FranklinWH system to your home Wi-Fi in minutes from the FranklinWH Homeowner App. Before you start, make sure your home Wi-Fi router is on and your phone is near the aGate (the smaller of the two, white Franklin boxes installed on the side of your home).

1. Open the FranklinWH Homeowner App and tap the Settings tab at the bottom of the screen.
2. Tap Network to open network settings.
3. Tap Wi-Fi, then tap Configure at the bottom of the Wi-Fi screen.
4. Follow the three-step Wi-Fi Configuration wizard. Confirm your router is on and tap Next; the app detects nearby Wi-Fi networks — select your Wi-Fi network and enter its password to finish.
